Introducing Quick Spin

One of the most [common challenges](#) that organizations face when implementing a continuous deployment strategy is the time and focus that it takes to set up the tools and processes.

But a secure, flexible, resilient, and scalable solution is available right now. Want to see if it's the right tool for your organization? Take Armory's Continuous Deployment Self-Hosted product for a quick spin with a free, easy evaluation version, right from your desktop.

What Is Self-Hosted Continuous Deployment?

Armory's Continuous Deployment Self-Hosted (CDSH) solution is a powerful tool to create flexible and secure pipelines.

You'll have the ability to increase reliability and avoid service outages by automatically deploying, verifying, and rolling back across multiple environments and deployment targets. With CDSH, you'll experience:

- Custom Stages & Pipeline Parameters
- Multi-Target Deployment
- Progressive Deployment Strategies like Blue/Green
- Automated Triggers from CI & Git

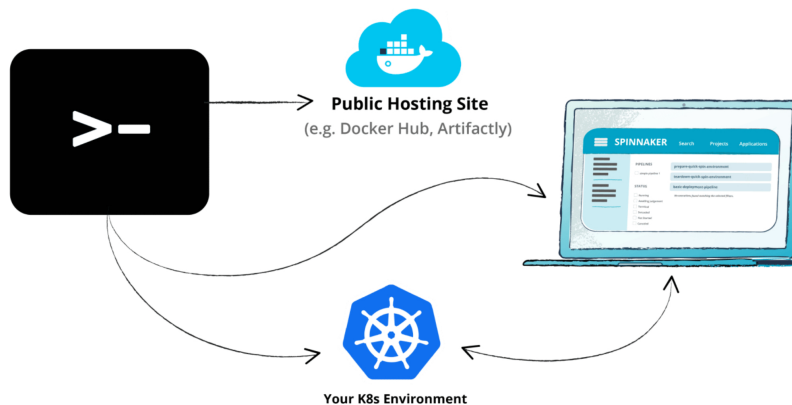

Evaluate Self-Hosted Continuous Deployment with Quick Spin

Want to test out the experience for yourself? Now there's a free, easy way to try out Self-Hosted Continuous Deployment right from your local machine. All you need is your local computer with Docker installed and an optional Kubernetes deployment target to test the deployment functions.

Test out Armory's version of Spinnaker (CDSH), see the UI (even without a target deployment), create your own test pipelines, and view your Kubernetes cluster info in action.
